

NEWSLETTER VOL 5 July 2006.

Get Benchched:

Building work benches is something a little outside what we would normally do, But a customer asked us to do it and here

We are preparing to make some more for a customer who saw them in the workshop.

From the Writer: The 2006 winter has really come on strong and hit all of us in some way. If your in the South Island, temperatures are at there lowest for many years, and in Auckland, you are thankful if there is electricity each day and that the \$ 2.99 shackle hangs in there.

Personnel Profile– Engineer.

Lance Pelham.

Lance has been with MGE for 5 years. Serving his apprenticeship with MGE, and recently completing his time. Lance operates our Ki Heung milling machine and is also a key member of our site service and site machining team.

In his spare time Lance is rebuilding his 1976 Chevrolet well side truck which he imported from the USA a couple of years ago. Looking at the photos I have seen, this will be some piece of kit when it is finished, don't know where you could park it safely though.

New Gensets for Jemm

The marine division has been busy over the last 2 months completing a load of mechanical work on the motor yacht Pacific Jemm prior to her departure for a 5 month stint in Fiji. This work included fitting 2 new generators. Pictured is lifting one of them through the main saloon on a 14 metre hiab extension.

Metal Reclamation

MGE has invested heavily in expertise, technology and equipment to weld reclaim metal, previously where worn or damaged machinery components had to be discarded and replaced with new ones. Today it is likely MGE can repair or reclaim the component to as good as, or better than new.

Before you discard anything, as broken or worn out, talk to us.

Our Mission

To produce the highest standard of engineering services to our clients. Meet their on going requirements and achieve total customer satisfaction, through consistent quality and innovative solutions at a realistic cost.
